Quarterly Commentary

Market Review

**Bond returns were unchanged.** In a volatile quarter, the broad U.S. bond market, as measured by the Bloomberg U.S. Aggregate Bond Index, ended the three-month period nearly unchanged. A November rally offset losses in October and December.

**Economic growth moderated.** Gross domestic product grew at a 2.3% annual rate in the third quarter, down from the second quarter’s robust pace of 6.7%. Key economic indicators, including manufacturing and home prices, slowed late in the year but continued to signal economic expansion. The unemployment rate declined to 3.9% in December, but the labor force participation rate remained below pre-pandemic levels.

**Fed started tapering.** As expected, the Federal Reserve (Fed) began tapering its asset purchases in November. By December, policymakers indicated they would speed up the process amid surging inflation. The Fed also hinted it might raise interest rates three times in 2022, which contributed to rising Treasury yields.

**Yields edged higher.** Treasury yields trended upward before reversing in November on news of a new coronavirus variant. As worst-case fears about omicron quickly faded, yields rose again on soaring inflation and the Fed’s plans to raise interest rates. The 10-year Treasury yield ended the period at 1.51%, up slightly from September 30. The two-year Treasury yield rose more sharply to 0.73%. The broad Treasury index was up slightly.

**Inflation soared to a nearly 40-year high.** Annual inflation jumped to 7% in December, the largest 12-month gain since June 1982. Supply chain disruptions, labor market shortages, soaring oil prices and persistent consumer demand drove prices higher. Real yields declined, longer-term inflation expectations rose, and Treasury inflation-protected securities (TIPS) rallied and outperformed nominal Treasuries.

**Credit spreads were mixed.** Investment-grade credit spreads widened slightly during the quarter, while high-yield spreads tightened modestly. Earnings and credit fundamentals remained solid, and corporate securities advanced fractionally to outperform Treasuries and the investment-grade bond index. Mortgage-backed securities broadly declined for the quarter, while securities based in credit-sensitive sectors generally advanced.

Portfolio Performance Review

**Corporate, securitized bonds weighed on results.** Our out-of-index position in corporate and securitized bonds modestly detracted from results versus the all-TIPS benchmark. TIPS outperformed most other fixed-income sectors during the quarter.

**Duration positioning added value.** We maintained a shorter-than-index duration, and this strategy aided the portfolio’s performance as yields increased.

**Inflation positioning, overweight relative to the benchmark contributed.** TIPS comprised most of the portfolio. To diversify inflation exposure, we also held inflation swaps in conjunction with non-index corporate and securitized securities. This strategy gave the portfolio overweight exposure versus the all-TIPS index to inflation protection, which lifted portfolio performance.

Goal and Strategy

Real return primarily through investment-grade, inflation-indexed bonds.

Economy still solid. We remain optimistic about the U.S. economy. Manufacturing, corporate fundamentals, home prices and consumer data have been robust, and the labor market has continued to improve. Record fiscal spending and continued, but waning, Fed support have also helped. However, we are mindful of ongoing challenges from supply chains, inflation, Fed policy and geopolitical events.

Fed must tread carefully. Inflation concerns prompted the Fed to accelerate its taper timeline. Once tapering ends in early 2022, the Fed likely will raise rates to combat inflation. The Fed faces a difficult task in tempering inflation without stifling growth. The good news is the Fed has options if the economy slows. It can slow or halt tapering or hold rates steady for a longer period.

Rates likely to rise. Record government spending, a growing economy and elevated inflation should continue to push Treasury yields higher. However, given the U.S. already has the highest yields among developed markets, we don’t expect rates to skyrocket. In our view, 2.25% may represent the ceiling for the 10-year Treasury yield. Accordingly, we still favor a short duration strategy.

Inflation nearing a peak. We expect inflation to peak in early 2022. From there it may moderate, but it likely will persist well above pre-pandemic rates. Several trends, such as record federal spending and deficits, rising wages and housing costs, supply/demand imbalances and efforts to bring operations back to the U.S., will continue to pressure prices. We still believe inflation-linked securities offer value.

Securitized bonds offer value. Valuations and late-quarter spread tightening prompted us to modestly reduce portfolio risk. Looking ahead, we favor structured versus corporate credit. We believe shorter-maturity, higher-quality securities related to reopening trends and ongoing, noncyclical growth stories offer value. These include aircraft, data center and certain residential mortgage securities.

Volatility in store. Uncertainties related to the pandemic, supply chains, global growth and geopolitics may spark volatility. A Fed policy error—hiking rates sooner/faster than the market expects or the economy can handle—is a key risk we’re watching. At the same time, we’ll look for opportunities that often emerge amid volatility. Active security selection remains key to performance.
Inflation-Adjusted Bond Fund

Data presented reflects past performance. Past performance is no guarantee of future results. Current performance may be higher or lower than the performance shown. To obtain performance data current to the most recent month end, please visit www.americancentury.com/performance. Investment return and share value will fluctuate, and redemption value may be more or less than original cost. Data assumes reinvestment of dividends and capital gains. Returns for periods less than one year are not annualized. For information about other share classes available, please consult the prospectus. There is no guarantee that the investment objectives will be met. Dividends and yields represent past performance and there is no guarantee that they will continue to be paid.

Historical performance for the I Class prior to its inception is based on the performance of R5 Class shares. I Class performance has been adjusted to reflect differences in expenses between classes, if applicable. Pre-inception differences in R5 Class and I Class performance are based on rounding.

Expense ratio is as of the fund’s current prospectus. The I Class minimum investment amount is $5 million ($3 million for endowments and foundations) per fund. The R5 Share Class is available only to participants in group employer-sponsored retirement plans where a financial intermediary provides recordkeeping services to plan participants.

Periods greater than one year have been annualized.

You should consider the fund’s investment objectives, risks, and charges and expenses carefully before you invest. The fund’s prospectus or summary prospectus, which can be obtained at americancentury.com, contains this and other information about the fund, and should be read carefully before investing.

The opinions expressed are those of the portfolio investment team and are no guarantee of the future performance of any American Century Investments portfolio. Statements regarding specific holdings represent personal views and compensation has not been received in connection with such views. This information is for an educational purpose only and is not intended to serve as investment advice.

The information is not intended as a personalized recommendation or fiduciary advice and should not be relied upon for investment, accounting, legal or tax advice.

Generally, as interest rates rise, the value of the securities held in the fund will decline. The opposite is true when interest rates decline.

The prospectus contains very important information about the characteristics of the underlying security and potential tax implications of owning this fund.

Source: Bloomberg Index Services Ltd. Bloomberg U.S. Treasury Inflation Protected Securities (TIPS) Index consists of Treasury inflation protected securities with a remaining maturity of one year or more.
Adjustable-Rate Mortgages (ARMs): Mortgages in which the interest rate is adjusted periodically according to a specific index.

Agency MBS: Mortgage-backed securities issued by U.S. government agencies.

Alternative Minimum Tax (AMT): A parallel tax system that was created to keep high income individuals from avoiding taxes through various deductions and exemptions.

Asset-Backed Securities (ABS): A form of securitized debt backed by loan assets such as auto loans, student loans, and credit card debt.

Basis Points: Used to express percentage values that are carried out to two decimal places. One basis point equals 0.01%.

Breakeven Rate: Yield difference between nominal Treasury notes and TIPS; indicates the market’s expectations for inflation.

Carry-Oriented Currencies: Higher-yielding currencies of countries where interest rates are generally higher than those of countries with lower-yielding currencies. These higher-yielding currencies are targeted for "carry trades," where investors borrow money in a low-interest rate currency and invest in a higher yielding currency, potentially profiting from the difference in interest rates.

Collateralized Loan Obligations (CLOs): A form of securitized debt, typically backed by pools of corporate loans and their payments.

Collateralized Mortgage Obligations (CMOs): A form of structured, securitized debt derived from mortgage-backed securities, typically backed by pools of residential mortgages and their payments.

Commercial Mortgage-Backed Securities (CMBS): Securities representing ownership in pools of commercial real estate loans used to finance the construction and improvement of income-producing properties such as hotels, shopping centers, and office buildings.

Commercial Paper: Short-term debt issued by corporations to raise cash and to cover current expenses in anticipation of future revenues.

Commodity: Basic raw materials such as precious metals and natural resources.

Consumer Price Index (CPI): Published by the U.S. government, CPI is the most commonly used statistic to measure inflation in the U.S. economy.

Contribution to Duration (CTD): A measure of bond portfolio risk that reflects a bond sector’s contribution to the overall duration of the portfolio.

Corporate Debt: Debt instruments issued by private corporations.

Covered Bonds: Debt securities backed by cash flows from pools of mortgages or public sector loans. The asset pools help secure or "cover" these bonds if the originating financial institution becomes insolvent.

Coupon Interest Rate: The interest rate that is assigned to an interest-paying fixed income security when it is issued.

Credit Analysis: An analysis of the financial strength of the issuer of a security, and the ability of that issuer to provide timely payment of interest and principal.

Credit Quality: Measures (usually in terms of high or low) the ability of issuers of debt securities to make timely interest and principal payments.

Credit Risk: The risk that the inability of the issuers of debt securities to make payments will cause these securities to decline in value.

Currency Overlay: A financial trading strategy used to separate the management of currency risk from other portfolio strategies. A currency overlay manager can seek to hedge the risk from adverse movements in exchange rates, and/or attempt to profit from tactical currency views.

Debt Service: The amount of money required within a given period to keep current on required/scheduled repayments of outstanding debt, including interest and principal.

Deflation: A decline in prices for goods, assets and services.

Derivatives: Securities whose performance and/or structure is derived from the performance and/or structure of other assets, interest rates or indexes.

Duration: A measure of the price sensitivity of a fixed income investment to changes in interest rates. The longer the duration, expressed in years, the more a fixed income investment's price will change when interest rates change.

Emerging Markets (EM) Debt: Debt issued by countries whose economies are considered to be developing or emerging from underdevelopment.

Excess Return: The return of an investment portfolio minus the return of what is considered to be a relatively risk-free asset, such as a U.S. Treasury bill.

Exchange-Traded Fund (ETF): Represents a group of securities but is traded on an exchange like an individual stock.

Federal Funds Rate: An overnight interest rate banks charge each other for loans.

Federal Open Market Committee (FOMC): The committee that sets interest rate and credit policies for the Federal Reserve System, the U.S. central bank.

Federal Reserve (Fed): The U.S. central bank, responsible for monetary policies affecting the U.S. financial system and the economy.

Fundamental Factors: Economic or financial data used in determining asset value.

Futures Contracts (Futures): Agreements to buy or sell a specific amount of a commodity or financial instrument at a particular price on a stipulated future date.

General Obligation (GO) Bonds: Municipal bonds that are secured by the full faith and credit of the issuer, including its taxing power.

Gross Domestic Product (GDP): A measure of the total economic output in goods and services for an economy.

Government-Sponsored Enterprises (GSEs): Privately owned corporations created by Congress to provide funding and help to reduce the cost of capital for certain borrowing sectors of the economy such as homeowners, students and farmers.

Headline Risk: Refers to the risk that a negative news media headline about one security issuer, incident or sector could affect the demand for and pricing of a much wider swath of securities.

Hedge: An investment designed to reduce the risk of an adverse price move in another investment. Often a hedge consists of taking an offsetting position in a related investment, such as a futures contract.

High-Yield (HY) Debt: Fixed income securities with lower credit quality and lower credit ratings. High-yield securities are rated below BBB.

Hybrid Adjustable-Rate Mortgages (ARMs): Combine the characteristics of fixed-rate and adjustable-rate mortgages, with rates remaining fixed for a set period of time and then adjusting periodically according to a specific index.

Inflation: An economic condition of rising prices for goods, services and assets, or equivalently, a declining value of money. Core inflation excludes food and energy prices, which tend to be volatile. It is the opposite of Deflation.

Inflation-Indexed Securities: Debt securities that offer returns adjusted for inflation. Typically, the principal of inflation-indexed securities is indexed to a widely used inflation measure and adjusted accordingly. Interest payments can be adjusted as well.

Glossary Sources: American Century Investments, Bloomberg Indices.
Interest Rate Risk: The risk that a fixed income investment’s value will change due to changes in interest rates.

Investment-Grade (IG) Debt: Fixed income securities with relatively high credit quality and credit ratings in the upper ranges of those provided by credit rating services. Using Standard & Poor's ratings as the benchmark, investment-grade securities are those rated BBB- or higher.

Leverage: The use of financial instruments and/or borrowed capital to increase potential returns or to increase purchasing power.

Long Position: Typical ownership of an asset or investment that gives the owner the right to transfer ownership, the right to any income generated by the asset, and the right to any profits or losses due to value changes.

Long/Short Position: A “market neutral” investing strategy that involves taking long positions in assets that are expected to increase in value and short positions in assets that are expected to decrease in value.

Master Limited Partnerships (MLPs): Publicly traded, generally higher-yielding securities of enterprises that engage in certain businesses, usually pertaining to the use of natural resources.

Municipal Securities: Debt securities typically issued by or on behalf of U.S. state and local governments, their agencies or authorities to raise money for a variety of public purposes, including financing for state and local governments as well as financing for specific projects and public facilities.

Nominal Yield: The interest rate to par value that the bond issuer promises to pay bond purchasers.

Non-Agency Mortgage-Backed Securities (MBS): MBS are groups of home mortgages that are sold by the issuing banks and then packaged together into “pools” and sold as a single security. Non-agency MBS are issued by private entities, such as financial institutions.

Mortgage-Backed Securities (MBS): A form of securitized debt that represents ownership in pools of mortgage loans and their payments.

Personal Consumption Expenditures (PCE): This price deflator which comes from the Bureau of Economic Analysis’ quarterly report on U.S. gross domestic product is based on a survey of businesses and is intended to capture the price changes in all final goods, no matter the purchaser. Because of its broader scope and certain differences in the methodology used to calculate the PCE price index, the Federal Reserve holds the PCE deflator as its preferred, consistent measure of inflation over time.

Quantitative Easing (QE): A form of monetary policy used by central banks to stimulate economic growth by purchasing domestic government securities to increase the domestic money supply, lower interest rates and encourage investors to make investments in riskier assets such as stocks and high-yield securities.

Real Estate Investment Trusts (REITs): Securities that trade like stocks and invest in real estate through properties or mortgages.

Real Yield: A yield that has been adjusted to remove the effects of inflation.

Revenue Bonds: Municipal bonds that are secured by the net revenues from the project or facility being financed.

S&P 500® Index: The S&P 500® Index is composed of 500 selected common stocks most of which are listed on the New York Stock Exchange. It is not an investment product available for purchase.

Secondary Market: A market where investors make purchases from other investors, rather than from the initial issuers.

Securitized Debt: Debt resulting from aggregating debt instruments into a pool of similar debts, then issuing new securities backed by the pool. ABS, MBS, and CMOs are common forms of securitized debt.

Short Position: Refers to the sale of an asset borrowed, not owned, by the seller in anticipation of a price decline. If the seller can buy the asset later (to return what was borrowed) at a lower price, a profit results. If the price rises, the borrower/seller suffers a loss.

Sovereign Debt: A country’s government-issued debt, priced in its native currency, which can be sold to investors in other countries.

Spreads, Maturity Spreads, Credit Spreads: Measured differences between two interest rates or yields that are being compared with each other. Spreads typically are measured between fixed income securities of the same credit quality, but different maturities (maturity spreads), or of the same maturity, but different credit quality (credit spreads).

Spread Sectors: Non-Treasury debt sectors with securities that usually trade at higher yields than comparable-maturity U.S. Treasury securities. These sectors typically trade at higher yields than Treasuries because they usually have relatively higher credit risk and/or more risk of prepayment.

Spread Widening, Tightening: Changes in spreads that reflect changes in relative value, with spread widening usually indicating relative price depreciation and spread tightening indicating relative price appreciation.

Swaps: Two-party contracts entered into primarily by institutional investors for periods ranging from a few weeks to more than one year. In a standard “swap” transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments.

Treasury Inflation-Protected Securities (TIPS): Inflation-linked debt securities issued by the U.S. Treasury.

Technical Factors: Market price behavior, trends, volume, and momentum data used in determining asset value.

Variable-Rate Demand Notes (VRDNs): Short-term debt securities that track market interest rates using periodic (daily, weekly, monthly, or quarterly) interest rate adjustments.

Weighted Average Life to Maturity: The average time in years to receive the principal repayments.

Yield: A rate of return for bonds and other fixed-income securities. There are several types of yields and yield calculations.

Yield Curve: A line graph showing the yields of fixed income securities from a single sector from a range of different maturities at a single point in time.

Yield to Maturity: A common performance calculation for fixed income securities, which takes into account total annual interest payments, the purchase price, the redemption value, and the amount of time remaining until maturity.

Real Yield to Maturity: Yield to maturity minus any “inflation premium” that had been added/priced in.

Zero-Coupon Securities: Debt securities that are sold at a deep discount then redeemed for their full face value at maturity.
