

AMERICAN CENTURY®

DIVERSIFIED CORPORATE BOND ETF

Corporate bonds are an important component of most fixed income portfolios. Many investors choose cap-weighted index funds for efficient exposure to this segment, often allocating separately to investment grade and a high-yield ETFs to ensure they're invested across the quality spectrum.

Yet many don't realize that doing so may expose their portfolios to unseen risks:

- Fixed income indexes typically overweight the most indebted companies and industries, which typically can mean increased credit risk.¹
- These indexes also tend to have relatively long durations, which can make them more vulnerable to rising interest rates.²
- Changes to the interest rate and credit environment can affect the relative attractiveness of investment-grade versus high-yield bonds.

^{1,2}Bloomberg Barclays US Intermediate-Term Corporate Bond Index, FactSet.

Holistically Managed Credit Portfolio

American Century Diversified Corporate Bond ETF integrates fundamental and quantitative expertise in a systematically managed portfolio. By emphasizing investment grade credits while dynamically allocating a portion of the portfolio to high yield, the portfolio's holistic approach strives to offer enhanced return potential versus passive cap-weighted portfolios.

INVESTMENT GRADE and HIGH-YIELD ALLOCATION

Dynamically adjusts investment grade and high-yield components in an effort to balance interest rate and credit risk

COMPANY ANALYSIS and BOND SELECTION

Screens individual credits to seek those with sound fundamentals, reduced default risk, and attractive valuations

INDUSTRY and DURATION EXPOSURES

Adjusts industry and duration exposures as risks and opportunities emerge

INVESTOR PROFILE

- Investors concerned that a cap-weighted index approach to corporate bonds could expose their portfolios to unwanted interest rate risk
- Investors seeking enhanced risk-adjusted return potential from their corporate bond allocation
- Investors who would like a corporate bond solution that adjusts to changing market conditions

Managing Money, Making A Difference

American Century Investments® is a leading asset manager focused on delivering investment results and building long-term client relationships while supporting research that can improve human health and save lives. It's how we and our clients together **Prosper With Purpose®**

Every day people are increasingly focused on investing to make the world a better place for themselves, their families, their organizations and the world at large. It is possible to live a more meaningful and impactful life and give back something that's more valuable than money.

When you invest with us, you can also invest in the future of others and have the potential to impact the lives of millions. That's possible because of the distinct relationship with the Stowers Institute for Medical Research, which owns more than 40% of American Century. Our dividend payments provide ongoing financial support for the Institute's work of uncovering the causes, treatments and prevention of life-threatening diseases, like cancer.

Together we can become a powerful force for good.

Exchange Traded Funds (ETF) are bought and sold through exchange trading at market price (not NAV), and are not individually redeemed from the fund. Shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns.

Investment return and principal value of security investments will fluctuate. The value at the time of redemption may be more or less than the original cost. Past performance is no guarantee of future results. Generally, as interest rates rise, the value of the securities held in the fund will decline. The opposite is true when interest rates decline. The lower rated securities in which the fund invests are subject to greater credit risk, default risk and liquidity risk. KORP is an actively managed ETF that does not seek to replicate the performance of a specified index. To determine whether to buy or sell a security, the portfolio managers consider, among other things, various fund requirements and standards, along with economic conditions, alternative investments, interest rates and various credit metrics. If the portfolio manager considerations are inaccurate or misapplied, the fund's performance may suffer.

Bloomberg Barclays US Intermediate-Term Corporate Bond Index measures the performance of Investment Grade securities with maturities of 1-10 years. It is not possible to invest directly in an index.

Duration is an indication of the relative sensitivity of a security's market value to changes in interest rates. The longer the weighted average duration of a fund, the more sensitive it is to interest rate fluctuations.

You should consider the fund's investment objectives, risks, and charges and expenses carefully before you invest. The fund's prospectus or summary prospectus, which can be obtained at americancentury.com, contains this and other information about the fund, and should be read carefully before investing.

It's my belief that if we make others successful, they in turn will make us successful.
