

Preserve Long-Term Purchasing Power

The Inflation-Adjusted Bond Fund is actively managed to help investors combat the corrosive effects of domestic inflation through holdings in high-quality, inflation-indexed bonds.

Data presented reflect past performance of Investor Class shares. Past performance is no guarantee of future results. Current performance may be higher or lower than the performance shown. To obtain performance data current to the most recent month end, please visit americancentury.com. Investment return and fund share value will fluctuate, and redemption value may be more or less than original cost. Data assume reinvestment of dividends and capital gains. For information about other share classes available, please consult the prospectus. There is no guarantee the fund will meet its investment objective.

Purchasing power protection

At least 80% of the fund's assets are invested in inflation-linked bonds, which are designed to help investors keep pace with rising consumer prices. For example, the U.S. Treasury periodically adjusts the principal on Treasury Inflation-Protected Securities (TIPS) to reflect reported changes in the Consumer Price Index (CPI).

High-quality diversification

The veteran management team primarily invests in investment-grade securities. TIPS account for the majority of the fund's holdings and are backed by the full faith and credit of the U.S. government. High-quality bonds generally are less correlated to stock market movements than lower quality securities.

Enhanced return potential

The investment team of sector specialists has the capability to take opportunistic positions in higher yielding bonds, such as corporate, mortgage-backed, and non-U.S. bonds, for greater return potential. At the same time, they manage the fund aiming to protect total returns from inflation risk.

The more inflation rises, the more purchasing power erodes

Growth of a hypothetical \$10,000 investment

You should consider the fund's investment objectives, risks, and charges and expenses carefully before you invest. The fund's prospectus or summary prospectus, which can be obtained at americancentury.com, contains this and other information about the fund, and should be read carefully before investing.

Investments in fixed income securities are subject to the risks associated debt securities including credit, price and interest rate risk.

The information is not intended as a personalized recommendation or fiduciary advice and should not be relied upon for investment, accounting, legal or tax advice.

In certain interest rate environments, such as when real interest rates are rising faster than nominal interest rates, inflation-protected securities with similar durations may experience greater losses than other fixed income securities.

Interest payments on inflation-protected debt securities will fluctuate as the principal and/or interest is adjusted for inflation and can be unpredictable.

Effective Duration is a weighted average of all bond durations in a fund's portfolio. Duration measures the price sensitivity of a bond or bond fund to changes in interest rates. Specifically, duration represents the approximate percentage change in the price of a bond or bond fund if interest rates move up or down 100 basis points.

The Average of Morningstar US OE Inflation-Protected Bond category is an average of all the funds in this category. It is not an investment product available for purchase.

The prospectus contains very important information about the characteristics of the underlying security and potential tax implications of owning this fund. Fund shares are not guaranteed by the U.S. Government.
